Instructions:

1. You will need an A3 colour printout of this board, dice and a counter for each player (cut-out counters are below or you could recycle some old buttons to use as counters).

2. To start in small groups or as a class, discuss what you have learnt about improving your environment as a CarbonKids school – think about what improvements you have made at home or at school and what things you still have left to do. Choose 10 positive actions to put on each ladder square and 10 negative actions to put on each snake square. Write or draw your actions in the correct squares – now you are ready to play.

3. To play each player rolls the dice and moves to the corresponding square on the board. If a player lands on a square describing an action that is good for the environment, they move up the ladder to a higher square. If a player lands on a square describing an action that is bad for the environment, they slide down the snake’s body to a lower square.

4. The winner is the first player to reach square 100!

Cut out the counters below and cut out and glue the dice, or if you have an ipod/pad, use the dice app at https://itunes.apple.com/en/app/dice/id429412843?mt=8

You WIN!!
